2015 final data

All method of delivery data are occurrence birth data except home birth, which are based on state of residence.

Home birth data does not indicate whether births at home were planned or unintended.

Connecticut and New Jersey will begin reporting VBAC and repeat cesarean data beginning with 2016 data.

National repeat cesarean rate will not be accurate until all states report data per the 2003 revised birth certificate specifications.

NTSV cesarean rate: Rate of term, singleton babies in the head-down (vertex) position born to first-time mothers
